

FOOD SAFETY COMPLIANCE · HACCP STANDARDS · BUILT FOR COMMERCIAL KITCHENS

Your Kitchen Shouldn't Rely on **Who's Standing Watch** Tonight

In a high-volume kitchen, food safety lives in experienced heads — and that's a single point of failure. SafeTrack digitises your HACCP monitoring — every receiving check, every temperature log, every corrective action — running reliably without your head chef needing to be everywhere at once.

WHY MANUAL IS NO LONGER ENOUGH

The cost of doing it the old way

30-40%

Of quality team time lost to manual record compilation and audit prep

8-72hr

Typical breach detection delay in manual monitoring environments

14-28d

Required to achieve audit readiness vs. on-demand validation

\$50K-\$250K+ Per Incident
Combined closure costs, legal settlements, remediation, and lost revenue from a single food safety event

Certification Loss
Market access restricted and customer delistings when audits fail

Brand Damage
Customer trust eroded and competitive disadvantage from public incidents

Scale Constraint
Unable to grow without proportional compliance overhead and headcount

DIGITAL TEMPERATURE MONITORING

Five Stages. Every Check Logged.

SafeTrack covers the full journey — from the morning delivery to the last plate leaving the pass — every CCP captured, timestamped, and audit-ready.

STAGE 01

Receiving

- Delivery vehicle temp checked on arrival
- Probe reading per incoming batch
- Supplier name and reject/accept logged

STAGE 02

Cold Storage

- Cool room monitored continuously, 24/7
- Alert the moment the reading starts climbing
- Full overnight history, always on record

SENSOR MONITORED

STAGE 03

Preparation

- Batch-by-batch time tracking for cold prep
- Alert when a batch has been out too long
- High-risk items flagged: dairy, egg, mince

STAGE 04

Cooking

- Probe reading logged per dish or batch
- High-risk items: pies, mince, pastry, sauces
- Documented exceptions for medium-rare orders

STAGE 05

Hot Holding & Service

- Holding temp checked before service opens
- Re-check log during extended service runs
- Final probe before it leaves the pass

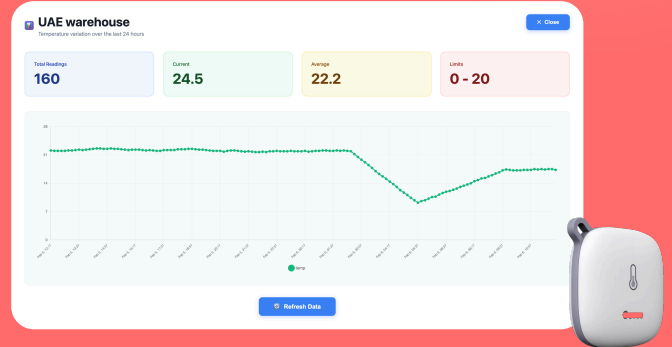

AUTOMATED ALERTING & CORRECTIVE ACTIONS

The Moment Something Goes Wrong, You Know About It

The moment a reading drifts outside its critical limit — the cool room climbing overnight, a probe that doesn't hit the mark at service — the right people are alerted instantly and a corrective action is already open and waiting to log.

SafeTrack connects with your existing temperature monitoring devices via Bluetooth, Wi-Fi, or API — no rip-and-replace required.

- ✓ Threshold crossed → instant push to Head Chef & Sous Chef
- ✓ Corrective action form opens automatically on breach
- ✓ What happened, who fixed it, when — logged and closed
- ✓ Full evidence trail — timestamped, signed off, audit-ready

BUILT-IN TRAINING MODULE

Every New Face Gets Trained, Assessed, and Certified Before They Touch a Chopping Board

SafeTrack's built-in Assessment Module lets you build and assign food safety MCQ assessments — auto-scored, directly linked to each staff member's profile. Personal hygiene, temperature control, cross-contamination, allergen handling, chemical use — everything your kitchen requires, built into the same system the whole team uses on their phone, completable in under 25 minutes.

- ✓ Aligned to FSANZ Standards 3.2.1 & 3.2.2 and your local food safety regulatory framework
- ✓ Auto-scored MCQs — results recorded without manual grading
- ✓ Certificate records linked to each staff member's profile
- ✓ Full training history on demand for inspections and audits
- ✓ Completable on any device — floor, break room, or day one

The screenshot shows the 'Food Safety Knowledge Assessment — Food Handlers' interface. It includes a sidebar with navigation options: Dashboard, My Tasks, My Forms, Form Repository, Data Sources, Organization, Workflow, and Reporting. The main content area displays a quiz titled 'FOOD SAFETY' with a question: 'Q1: The temperature range where bacteria in food multiply most rapidly is known as the 'danger zone'. What is this range?'. The options are: A) 0°C to 40°C, B) 0°C to 60°C, and C) 10°C to 70°C. The interface also shows a user profile for 'Andrew Doe' and a 'Logout' button.

PLATFORM CAPABILITIES

Everything Your Kitchen Needs, **In One System****Digital Temp Monitoring**

Every stage from receiving to service logged, timestamped, and searchable. No more paper logs.

**IoT Temperature Sensors**

Wireless probes monitor cool rooms and hot holding 24/7 — no manual checks, no gaps overnight.

**Instant Breach Alerts**

Push notification to the right people the moment any CCP reading goes outside its critical limit.

**Corrective Action Workflow**

Breach triggers an automatic action form — logged, signed off, and stored in the audit trail.

**Built-In Assessment Module**

MCQ assessments auto-scored, certificates linked to each staff member — completable on any device.

**Paperless Records**

Replace paper logs for receiving, cooking, holding, and cleaning — audit-ready on demand.

**Multi-Site Dashboard**

Full compliance status, open actions, and training gaps — consolidated across every outlet and site.

**Full Traceability**

Every action tied to who, when, and what batch. Trace any incident back through the chain in seconds.

**Dynamic Form Builder**

Custom checklists and forms with conditional logic, validation rules, and digital sign-off — built without code.

**Approval Workflows**

Multi-step sign-offs with role-based routing — corrective actions, receiving checks, and cleaning sign-offs all tracked.

DELIVERY TIMELINE

Live in 6 Weeks

A structured rollout built around your kitchen calendar — minimal disruption, no big-bang go-live.

- DAYS 1 – 3

Discovery & Requirements
CCP mapping walkthrough with your head chef, site confirmation, and user roles defined.
- WEEK 1 – 2

System Implementation
Platform provisioned, kitchen configured, user accounts created, IoT sensors registered and online.
- WEEK 2 – 4

Configuration & Customisation
HACCP forms built to your plan, alert thresholds set per CCP, corrective action workflows configured, supporting documents uploaded.
- WEEK 5

Testing & UAT
End-to-end testing across all 5 monitoring stages, breach alert verification, corrective action flow sign-off with your team.
- WEEK 6

Training & Go-Live
On-site kitchen staff training, assessments assigned and staff certified, management dashboard walkthrough — system live and running.

INVESTMENT

Simple, All-In Pricing

PRICING

Contact Us

Tailored to your kitchen and requirements

- 3-Year Contract
- Billed Annually in Advance

WHAT'S COVERED

- Platform Licence

Per kitchen licence — full platform access for the contract term
- Implementation

Full setup, CCP configuration, IoT sensor installation, and system go-live
- Training

On-site staff training, assessment setup, and management dashboard walkthrough
- Support

Software support included for the full 3-year contract term
- Thermometer Probing Device

One standard unit included for on-the-spot temperature readings

Sensor hardware quoted separately based on site requirements. A detailed scope will be provided post-discovery.
